Summary

Frontend Engineer with 5+ years of experience building scalable, offline-first mobile and web applications using React Native and ReactJS. Delivered government-scale platforms serving 1.3 million+ users, with a strong focus on performance optimization, low-end device compatibility, and rapid release cycles. Proven track record of owning critical modules end-to-end and shipping under high-pressure deadlines.

Experience

Daffodil Software

Jan 2022 - Present

- Sr. Associate Software Engineer (L-3)
- (prev) Associate Software Engineer (L-2)

Gurgaon, India

Project - Poshan Tracker - Digital India

- Led development on Poshan Tracker project - a nationwide app used by 1.3 million Anganwadi workers to track daily nutrition, Women and Child data and AI face authentication for Take-Home Rations.
- Integrated Meals and Attendance modules with offline-first capability and unit tests, improving sync reliability and app performance by 60% on low-end devices.
- Technologies - React Native, Javascript, Typescript, JSON, Git Openforge, SQLite app database, Jest

Project - UPSC Face Authentication App - Digital India

- Delivered a low latency solution used during NDA and CDS examinations ensuring smooth and live candidate authentication using face capture and admit card QR code.
- Implemented image compression enabling faster uploads to server and improving onboarding time per candidate during peak exam hours.
- Technologies - React Native, Javascript, Typescript, JSON, Git Openforge, SQLite app database

Unthinkable Solutions (Daffodil Software)

Oct 2020 - Dec 2021

- Jr. Associate Software Engineer (L-1)

Gurgaon, India

- Created a hybrid mobile app for Ziqitza - a private Healthcare company, serving a network of 9 lakh drivers that features an easy panel for assigning patient pickup and drop duties to drivers,
- Coordinated with stakeholders to invent an application for the supervisors, enabling real-time monitoring of the drivers, tracking their attendance and issues.
- Modules developed - Google Maps, QR scanner, creating reusable components, Reports, search filters.

Harman Connected Services

June - August 2019

Project Intern

Gurgaon, India

- Prepared robust Python automation scripts, resulting in a 50% reduction in testing time of IoTrust Security Platform, ensured a more reliable deployment process for critical updates.

Education

Bachelor of Engineering - Computer Science, CGPA - 8.65

2016 - 2020

BMIET, Guru Gobind Singh Indraprastha University

New Delhi, India

Skills

Languages and Frameworks - React Native, React.js, Javascript (ES6+), Typescript, Redux, Hooks

Core Concepts - Data Structures in C++ and Javascript, System Design, Performance Optimization and Offline First Apps

Others - Git, SQLite, REST APIs, NodeJS, GraphQL, Jest for Unit Testing, CI/CD, Amazon Q, Claude AI

Achievements

Achieved 2 consecutive promotions from Junior to Senior Software Engineer within the same organization

Recognized by team/stakeholders for handling high-pressure releases and critical modules

Solutioning Star Debut 2021 - Unthinkable Solutions

Deloitte Award for best innovation - Smart India Hackathon 2018
